In the above graphic, the words in quotation marks are a mnemonic for remembering which three trigonometric functions (sine, cosine and tangent) are positive in each quadrant.

Euclidean geometry is a mathematical system attributed to Alexandrian Greek mathematician Euclid, which he described in his textbook on geometry: the Elements.

Line Intersecting a solid Find piercing points by using sectional views. 1. Think of the given line in one view to be the edge view of a section of the given solid. 2. The points where the line crosses the base of the cylinder in this view are the piercing points. 3. Find the piercing points in the

$\hat{\in}$ §0. Eversion of the Laves graph. The Laves graph is triply-periodic (on a bcc lattice) and chiral. It is of interest for a variety of reasons, not least because a left- and right-handed pair of these graphs (an

The concept of isogeometric analysis is proposed. Basis functions generated from NURBS (Non-Uniform Rational B-Splines) are employed to construct an exact geometric model.

The usual way of representing a bounded planar surface (facet) in computer graphic applications is as a

sequence of vertices. Shading algorithms and ray-tracing generally requires knowledge of the normal to the facet, this is calculated by taking the cross product two of the edge vectors of the facet.
