Servo control is achieved by sending a servo a PWM (pulse-width modulation) signal, a series of repeating pulses of variable width where either the width of the pulse (most common modern hobby servos) or the duty cycle of a pulse train (less common today) determines the position to be achieved by the servo.

### **Servo control - Wikipedia**

7 Modulating piston movement sender G149 supplies the control unit with information on the momentary position of the quantity adjuster in the injection pump.
