Modeling, Simulation and Identification for Control of Tandem Cold Metal Rolling This work aims at showing the deduction of a model, tailored for control, for a tandem cold metal rolling of

Modeling, Simulation and Identification for Control of

The tandem rolling of cold metal strip is a large, highly complex nonlinear multivariable process the control of which poses a significant engineering challenge.

Tandem Cold Metal Rolling Mill Control | SpringerLink

The continuous tandem cold rolling of metal strip is a highly nonlinear multi-variable complex process the control of which presents additional challenges over those encountered in the control of ...

The tandem cold rolling mill of metal strip is a complex multivariable process whose control presents a significant engineering challenge. The present technology generally relies on a control structure where in the interactive coupling between process variables is partially reduced by several SISO(single-input-single-output) and SIMO(single-input-multi-output) control loops operating on ...

Rolling of Metals IME240/340. Rolling of Metals â€œ Rolling â€œreducing the thickness or changing the cross-section of a long workpiece by compressive forces applied through a set of rolls â€œ Developed in late 1500s â€œ Accounts for 90% of all metals produced by metal working processes â€œ Often carried out at elevated temperatures first (hot rolling) to change coarse-grained, brittle, and ...

Rolling of Metals - University of Rhode Island

The control of tandem cold rolling of metal strip constitutes a significant engineering challenge to control engineers. This is due mostly to the complexity of the interactions between the process ...

A New Strategy for Control of Tandem Cold Metal Rolling

through the grains of the metal the rolling of threads imparts improved strength through the grains of the metal, the rolling of threads imparts improved strength because of cold working and favorable grain flow.

Metal Rolling Processes and Equipment

Rolling processes 5-1 introduction: Rolling is the process of reducing the thickness or changing the cross section of a long workpiece by compressive forces applied through a set of rolls, as shown in figure (5-1). Fig.

(5-1) Most rolling is carried out by hot working, called hot rolling, owing to the large amount of deformation required. Hot-rolled metal is generally free of residual stresses ...

Tandem Cold Metal Rolling Mill Control: Using Practical

Hot rolling is a metalworking process that occurs above the recrystallization temperature of the material. After the grains deform during processing, they recrystallize, which maintains an equiaxed microstructure and prevents the metal from work hardening.
